

SR100⁺™

■ Perforated Zone
(where applicable)

Description

Deck profile typically used as the structural deck for single ply membrane, double skin built-up, standing seam, green roof and asphalt systems. Also available as part of the Protex Insulated System.

Benefits

- Long-spanning shallow deck
- Can be manually installed with limited need for additional lifting plant
- Perforated option available for enhanced acoustic performance

Gauge

- 0.7mm (Steel)
- 0.9mm (Steel)
- 1.2mm (Steel)

Specification

- 720mm cover width
- 100mm deep
- Perforated webs available providing 10.2% voided area (exposed) or 16.5% (cover) with pattern RB4546, 4.5mm holes @ 6.3mm diagonal pitch.

Grade

- Steel S350

Coatings and Finishes

- Galvanised Steel
- Interior liner
- Perforated

Profile Properties

Load Tables Conditions

Tables consider deflection limits of:

Positive load (Gravity) - Span /200

Negative loads (Uplift) - Span /150

These tables do not consider loads applied during construction of the roof finish - additional load-distributing measures may be required in some situations.

All loads within table consider a partial factor of 1.5.

The deck self-weight has not been allowed for in the generation of these tables, so must be included in the applied loads referenced.

Section properties are calculated in accordance with Eurocode 3, assisted by testing where applicable.

These load/span tables do not consider plastic design (moment redistribution). Improved loadings may be possible for some double and multi-span configurations.

For spans not covered in these tables or indicated as '-', contact SMD Technical Team or Download Elements® Design Software available from SMD website.

Fixing checks for uplift must be considered separately.

Tables based on bearing width (steel beam) of 100mm.

Numbers shown **red** exceed maximum Health and Safety manual handling guidelines, additional lifting plant is recommended for these situations.
